

# Personal Genetics Education & Dialogue (PGED) is narrowing the gap between **scientific discovery** and **societal discourse on genetics**.

By promoting awareness, engagement, and individual empowerment, PGED is helping to pave the way toward a future where genetics serves all.

## ● Our Approach

Based at Harvard Medical School, PGED raises awareness and inspires curiosity, reflection, and dialogue about genetics. We create resources and offer programs that explore **genetics' relevance and impact** on people's lives.

By highlighting the “**personal**” in genetics, we strive to help people build knowledge and confidence to speak up, ask questions, and make informed decisions based on their needs and values.

## ● Our Programs

Since **2006**, PGED resources and programming have been **free** to all. Our programming reaches teachers and students, filmmakers, library patrons, faith communities, policymakers, and scientists.

We share a monthly newsletter and maintain an ever-expanding resource library of lesson plans, videos, animations, and more at **PGED.org**.
